Cow Comfort and Production
for the Family Farm

The Sturdy Built Advantage

Generation II Tie Stall System

LIBERTY LOOP
Designed for Cow Comfort

The Generation II Tie Stall System from Sturdy Built is built on a concept of flexibility for ultimate cow comfort. Starting with the stainless steel base set in concrete, and the bolt-together stall structure, we have engineered one of the most intricately adjustable tie stall systems.

Neck rail height and stall height, as well as water bowls and dividers, are movable in 2 inch increments. This system makes installation easier, requiring only a stall width decision when concreting the curb. After concrete pouring is completed, the dairyman can fine-tune stall and neck rail measurements as he begins the stall installation process.

Gutter Grates for Dairy Barns

Black (Uncoated) or Galvanized in 18" to 30" Widths

Sturdy Built Gutter Grates

Our standard gutter grates are 18 in. - 30 in. wide (6-12 bars) in 5 ft. and 10 ft. lengths, in either black (uncoated) or galvanized finish. Contact your representative for more information on custom configurations.
